Subject Index

Absorption
nitrous acid formation and decomposition during the absorption of nitrogen oxides, 75
Absorption efficiencies
nitrous acid formation and decomposition during the absorption of nitrogen oxides, 75
Adsorption isotherm
a method for the estimation of surface diffusivity in the absence of film mass transfer resistance, 41
Alcohol dehydration
oil extraction of dried ground corn with ethanol, B103
Alcohols
the solubilities of nitrous oxide, carbon dioxide, aliphatic ethers and alcohols, and water in cryogenic liquids, 25
Aliphatic ethers
the solubilities of nitrous oxide, carbon dioxide, aliphatic ethers and alcohols, and water in cryogenic liquids, 25
Ammonia stripping
studies on ammonia stripping in a wetted butterfly valve wastewater scrubber system, B67
Anaerobic digestion
dynamics and mutivariable control analysis for anaerobic digestion, B81
Azeotropic distillation
ethanol dehydration by azeotropic distillation with a mixed-solvent entrainer, 59

Bed porosity
phase holdup characteristics in three phase fluidized beds, 67
Benzene
ethanol dehydration by azeotropic distillation with a mixed-solvent entrainer, 59
Bioconversion
bioconversion of sugars to ethanol in an immobilized cell packed bed bioreactor — dynamic response to perturbations in process parameters, B1

Capillary gap cell
hydrodynamics and mass transfer in a capillary gap cell provided with turbulence promoters, 107
Carbon dioxide
the solubilities of nitrous oxide, carbon dioxide, aliphatic ethers and alcohols, and water in cryogenic liquids, 25
Catalyst deactivation
reactions of mixtures in supported catalysts I. Models for catalyst deactivation and support pore size change and a single pellet behavior, 11
Cobalt salts
n-octane liquid-phase oxidation catalyzed by cobalt salts: overall kinetic and product distribution, 33
Complexation
coupling of kinetic processes and thermodynamic equilibria in two-substrate immobilized enzyme reactors, B93
Concentration-dependent deactivation
a parametric study of isothermal fixed bed catalytic reactors undergoing concentration-dependent deactivation, 1
Cryogenic liquids
the solubilities of nitrous oxide, carbon dioxide, aliphatic ethers and alcohols, and water in cryogenic liquids, 25
Cyclic operation
modelling and optimization of the cyclic regime of an ion-exchange process for sugar juice softening, B53

Diffusion
a method for the estimation of surface diffusivity in the absence of film mass transfer resistance, 41
Digital simulation
dynamics and multivariable control analysis for anaerobic digestion, B81
Dried ground corn
oil extraction of dried ground corn with ethanol, B103
Dynamic model
dynamics and multivariable control analysis for anaerobic digestion, B81
Dynamic response
bioconversion of sugars to ethanol in an immobilized cell packed bed bioreactor — dynamic response to perturbations in process parameters, B1

Electrochemical
hydrodynamics and mass transfer in a capillary gap cell provided with turbulence promoters, 107
Emulsions
on the flow characteristics of highly concentrated oil-in-water emulsions, 53
Enthanol dehydration
ethanol dehydration by azeotropic distillation with a mixed-solvent entrainer, 59
Ethanol
oil extraction of dried ground corn with ethanol, B103

Feed flow rate
bioconversion of sugars to ethanol in an immobilized cell packed bed bioreactor — dynamic

response to perturbations in process parameters, B1
Feed sugar concentration
bioconversion of sugars to ethanol in an immobilized cell packed bed bioreactor — dynamic response to perturbations in process parameters, B1
Film
a method for the estimation of surface diffusivity in the absence of film mass transfer resistance, 41
Flow characteristics
on the flow characteristics of highly concentrated oil-in-water emulsions, 53

Holdup
prediction of holdup in solid–fluid flow, 49
Hydrodynamics
hydrodynamics and mass transfer characteristics of packed bubble columns, 95
hydrodynamics and mass transfer in a capillary gap cell provided with turbulence promoters, 107

Immobilized enzyme reactors
coupling of kinetic processes and thermodynamic equilibria in two-substrate immobilized enzyme reactors, B93
Internal diffusion
experimental assessment of internal diffusion limitations in yeast flocs, B13
Ion exchange
modelling and optimization of the cyclic regime of an ion-exchange process for sugar juice softening, B53
Isothermal fixed bed
a parametric study of isothermal fixed bed catalytic reactors undergoing concentration-dependent deactivation, 1
Isotropic turbulence
mathematical models for design of bioreactors: applications of Kolmogoroff's theory of isotropic turbulence, B19

Kinetic processes
coupling of kinetic processes and thermodynamic equilibria in two-substrate immobilized enzyme reactors, B93
Kinetics
n-octane liquid-phase oxidation catalyzed by cobalt salts: overall kinetic and product distribution, 33
Kolmogoroff's theory
mathematical models for design of bioreactors: applications of Kolmogoroff's theory of isotropic turbulence, B19

Laminar crossflow
slow bimolecular reactions in a deflected turbulent jet, 127
Laminar flow
on the flow characteristics of highly concentrated oil-in-water emulsions, 53
Liquid-phase oxidation
n-octane liquid-phase oxidation catalyzed by cobalt salts: overall kinetic and product distribution, 33

Mass transfer
hydrodynamics and mass transfer characteristics of packed bubble columns, 95
hydrodynamics and mass transfer in a capillary gap cell provided with turbulence promoters, 107
Mass transfer resistance
a method for the estimation of surface diffusivity in the absence of film mass transfer resistance, 41
Mathematical models
mathematical models for design of bioreactors: applications of Kolmogoroff's theory of isotropic turbulence, B19
Membrane microreactor
experimental assessment of internal diffusion limitations in yeast flocs, B13
Michaelis–Menten kinetics
study of Michaelis–Menten kinetics with linear-type product inhibition in ultrafiltration membrane reactors: mathematical model, experimental and data correlation, B43
Mixed-solvent entrainer
ethanol dehydration by azeotropic distillation with a mixed-solvent entrainer, 59
Molecular size
reactions of mixtures in supported catalysts I. Models for catalyst deactivation and support pore size change and a single pellet behavior, 11
Multivariable control analysis
dynamics and multivariable control analysis for anaerobic digestion, B81

Nitric acid
nitrous acid formation and decomposition during the absorption of nitrogen oxides, 75
Nitric oxide oxidation
slow bimolecular reactions in a deflected turbulent jet, 127
Nitrogen oxides
nitrous acid formation and decomposition during the absorption of nitrogen oxides, 75
Nitrous acid
nitrous acid formation and decomposition during the absorption of nitrogen oxides, 75
Nitrous oxide
the solubilities of nitrous oxide, carbon dioxide, aliphatic ethers and alcohols, and water in cryogenic liquids, 25

n-Octane
ethanol dehydration by azeotropic distillation with a mixed-solvent entrainer, 59
n-octane liquid-phase oxidation catalyzed by cobalt salts: overall kinetic and product distribution, 33
Oil extraction
oil extraction of dried ground corn with ethanol, B103

Oil-in-water emulsions
on the flow characteristics of highly concentrated oil-in-water emulsions, 53
Oxidation
n-octane liquid-phase oxidation catalyzed by cobalt salts: overall kinetic and product distribution, 33

Packed bed bioreactor
bioconversion of sugars to ethanol in an immobilized cell packed bed bioreactor — dynamic response to perturbations in process parameters, B1
Packed bubble columns
hydrodynamics and mass transfer characteristics of packed bubble columns, 95
Performance
mathematical models for design of bioreactors: applications of Kolmogoroff's theory of isotropic turbulence, B19
Perturbations
bioconversion of sugars to ethanol in an immobilized cell packed bed bioreactor — dynamic response to perturbations in process parameters, B1
Phase holdup
phase holdup characteristics in three phase fluidized beds, 67
Pore size
reactions of mixtures in supported catalysts I. Models for catalyst deactivation and support pore size change and a single pellet behavior, 11
Process optimization
modelling and optimization of the cyclic regime of an ion-exchange process for sugar juice softening, B53
Product distribution
n-octane liquid-phase oxidation catalyzed by cobalt salts: overall kinetic and product distribution, 33
Product inhibition
study of Michaelis–Menten kinetics with linear-type product inhibition in ultrafiltration membrane reactors: mathematical model, experimental and data correlation, B43

Reaction mixtures
reactions of mixtures in supported catalysts I. Models for catalyst deactivation and support pore size change and a single pellet behavior, 11
Reactor
hydrodynamics and mass transfer in a capillary gap cell provided with turbulence promoters, 107

Single pellet behavior
reactions of mixtures in supported catalysts I. Models for catalyst deactivation and support pore size change and a single pellet behavior, 11
Slow bimolecular reactions
slow bimolecular reactions in a deflected turbulent jet, 127
SO_2 oxidation
steady-state models for SO_2 oxidation in a trickle-bed reactor, 121
Solid–fluid flow
prediction of holdup in solid–fluid flow, 49
Solubility
the solubilities of nitrous oxide, carbon dioxide, aliphatic ethers and alcohols, and water in cryogenic liquids, 25
Spedding–Chen holdup relation
prediction of holdup in solid–fluid flow, 49
Steady-state models
steady-state models for SO_2 oxidation in a trickle-bed reactor, 121
Substrate diffusion
coupling of kinetic processes and thermodynamic equilibria in two-substrate immobilized enzyme reactors, B93
Sugar decalacification
modelling and optimization of the cyclic regime of an ion-exchange process for sugar juice softening, B53
Sugar juice
modelling and optimization of the cyclic regime of an ion-exchange process for sugar juice softening, B53
Surface diffusivity
a method for the estimation of surface diffusivity in the absence of film mass transfer resistance, 41

Thermodynamic equilibria
coupling of kinetic processes and thermodynamic equilibria in two-substrate immobilized enzyme reactors, B93
Three phase fluidized beds
phase holdup characteristics in three phase fluidized beds, 67
Trickle-bed reactor
steady-state models for SO_2 oxidation in a trickle-bed reactor, 121
Turbulence promoters
hydrodynamics and mass transfer in a capillary gap cell provided with turbulence promoters, 107
Turbulent jet
slow bimolecular reactions in a deflected turbulent jet, 127
Two-substrate reaction kinetics
coupling of kinetic processes and thermodynamic equilibria in two-substrate immobilized enzyme reactors, B93

Ultrafiltration membrane reactors
study of Michaelis–Menten kinetics with linear-type product inhibition in ultrafiltration membrane reactors: mathematical model, experimental and data correlation, B43

Wastewater
studies on ammonia stripping in a wetted butterfly valve wastewater scrubber system, B67
Wetted butterfly valve scrubber system
studies on ammonia stripping in a wetted butterfly valve wastewater scrubber system, B67

Yeast flocs
experimental assessment of internal diffusion limitations in yeast flocs, B13
